Automation and computer integrated technologies

EDUCATIONAL AND SCIENTIFIC PROGRAM

third (PhD) higher education level

Speciality 151 Automation and Computer Integrated

Technologies

Field of Study 15 Automation and Instrumentation

Engineering

Qualification Philosophy Doctor of Automation and

Computer Integrated Technologies

Enacted	from	2022/202	23	aca	dei	nic	year
by order	of the	Rector of	of K	PI.	I.	Sik	orsky,
form		p. №	NO	N			

PREAMBLE

DEVELOPED project group:

Project team Chairman:	
Prof. Anatolii Zhuchenko, Doctor of Technica Head of Automation Hardware and Software	
Project team members:	
Dr. Volodymyr Voloshchuk, Doctor of Techniacting as the Head of Heat Power Engineer D	
Prof. Yurii Kuts, Doctor of Technical Science Instruments and Systems Department	e, Professor, Professor of NDT
Dr. Dmytro Kovalyuk, Candidate of Technica Associate Professor of Automation Hardware	
Dr. Denys Skladannyy, Candidate of Technica Associate Professor of Automation Hardware	
Dr. Maryna Philipova Candidate of Technic Associate Professor of Device production dep	
Vadym Lebid, technical director of the Privrepresentative of employers.	vate enterprise "Artesia",
Mykola Khibeba, graduate student of study	group 151-f61, applicant
AGREED:	
Scientific and Methodological Council of I speciality 151 Automation and Computer Int	gor Sikorsky Kyiv Polytechnic Institute for tegrated Technologies
Head of the SMB-151	Prof. Anatoliy Zhuchenko
	(Protocol No. 3 dated Desrmber 7, 2021)
Methodological Council of Igor Sikorsky Ky	iv Polytechnic Institute
Methodological Council Chairman	Prof. Yuriy YAKYMENKO
	(Protocol No dated)

CONSIDERED:

- 1. Higher Education Standard (draft project) in the specialty 151 «Automation and computer-integrated technologies», is posted on the Ministry of Education and Science Ukraine website of the for public discussion.
- 2. Scientific and pedagogical workers suggestions of graduating departments of engineering-chemical, instrument-making, and heat power faculties.
- 3. Stakeholders comments and suggestions based on the public discussion results:
 - a. higher education applicants who study in educational programs of specialty 151 «Automation and computer-integrated technologies»;
 - b. specialists of the Igor Sikorsky Kyiv Polytechnic Institutes Department of the Educational Process Quality and the Department of the Educational Process Organization.
 - c. specialists in automation and computer-integrated technologies (reviews, reviews and letters are attached).

1. EDUCATIONAL PROGRAM PROFILE

Speciality 151 Automation and Computer Integrated Technologies

	1 – General Information				
Higher education	National Technical University of Ukraine, Igor Sikorsky Kyiv Polytechnic				
name, faculty	institution full name, faculty Institute, Faculty of Chemical Engineering				
Higher education	Degree – PhD				
degree and the qualification title	Qualification – Philosophy Doctor of Automation and Computer Integrated Technologies				
Educational program official name	Automation and Computer Integrated Technologies				
Diploma type	PhD diploma, Training period 4 years.				
and educational	Educational component 48 ECTS credits.				
program scope	Scientific component provides own research and completing text of				
PhD Thesis which describes the most significant research re					
Existing	The program has no accreditation. Accreditation is planed by National				
accreditation	Higher Education Quality Assurance Agency in 2021				
Levels	NRC of Ukraine – 8 level.				
	QF-EHEA – third cycle.				
	EQF-LLL – 8 level				
Prerequisites	Master degree				
Мова(и)	Ukrainian / English				
викладання					
Educational	Until accreditation

2 – Educational program purpose					

Training, in accordance with the University Strategy, highly qualified, competitive, integrated into the European and world scientific, technical and educational space specialists with PhD degree in automation and computer-integrated technologies, who are able to define, formulate, summarize and solve scientific and practical tasks; to have fundamental and applied research methods in automation and computer-integrated technologies, as well as are able to effectively solve innovative problems of the appropriate level, to carry out pedagogical activities in the specialty, work in higher education institutions, research institutions and leading enterprises in Ukraine and abroad

Предметна область Activity object: control objects and processes (technological processes, productions, organizational structures), technical, informational, mathematical, software and organizational support of automation systems in various fields. Learning objectives: training of specialists in field of automation and computer-integrated technologies, who are able to solve complex scientific problems providing innovation activities in the field of automation and computer-integrated technologies, which involves a deep rethinking of existing and creation of new holistic knowledge and/or professional practice. Subject area theoretical content: concepts and methodologies of synthesis, design, automation objects and systems studying based on the methods and principles of systems analysis, modern control theory, information theory, mathematical modeling and optimization, theory of algorithms as well as artificial intelligence. Methods, techniques and technologies: state of the art methods of theoretical and experimental research, synthesis, design, control systems setup; methods and instruments for research projects management, presenting results of the research, protection of intellectual property, higher education methodology. Tools and equipment. Computer and information technologies, microprocessors, specialized software for automated systems design and maintenance. Specialized software and technical means providing experiments automation. Educational program main focus Educational program is based on the existing state of the art scientific provisions, taking into account the current state of the activaction in field of automation and computer-integrated technologies, focused on current knowledge, skills and experience, within which further professional and scientific career is possible. Keywords: automation, computer-integrated technologies, automation technical means, optimization, control systems.		3 – Характеристика освітньої програми					
informational, mathematical, software and organizational support of automation systems in various fields. **Learning objectives: training of specialists in field of automation and computer-integrated technologies, who are able to solve complex scientific problems providing innovation activities in the field of automation and computer-integrated technologies, which involves a deep rethinking of existing and creation of new holistic knowledge and/or professional practice. **Subject area theoretical content:** concepts and methodologies of synthesis, design, automation objects and systems studying based on the methods and principles of systems analysis, modern control theory, information theory, mathematical modeling and optimization, theory of algorithms as well as artificial intelligence. **Methods, techniques and technologies:** state of the art methods of theoretical and experimental research, synthesis, design, control systems setup; methods and instruments for research projects management, presenting results of the research, protection of intellectual property, higher education methodology. **Tools and equipment.** Computer and information technologies, microprocessors, specialized software for automated systems design and maintenance. Specialized software and technical means providing experiments automation. **Educational program main focus** **Special education** in the automation and instrumentation field, specializing in automation and computer-integrated technologies. **The program is based on the existing state of the art scientific provisions, taking into account the current state of the science in field of automation and computer-integrated technologies, focused on current knowledge, skills and experience, within which further professional and scientific career is possible. **Keywords:** automation, computer-integrated technologies,	Предметна						
automation systems in various fields. **Learning objectives:* training of specialists in field of automation and computer-integrated technologies, who are able to solve complex scientific problems providing innovation activities in the field of automation and computer-integrated technologies, which involves a deep rethinking of existing and creation of new holistic knowledge and/or professional practice. **Subject area theoretical content:* concepts and methodologies of synthesis, design, automation objects and systems studying based on the methods and principles of systems analysis, modern control theory, information theory, mathematical modeling and optimization, theory of algorithms as well as artificial intelligence. **Methods, techniques and technologies:* state of the art methods of theoretical and experimental research, synthesis, design, control systems setup; methods and instruments for research projects management, presenting results of the research, protection of intellectual property, higher education methodology. **Tools and equipment.** Computer and information technologies, microprocessors, specialized software for automated systems design and maintenance. Specialized software and technical means providing experiments automation. **Educational program main focus** **Educational program is based on the existing state of the art scientific provisions, taking into account the current state of the science in field of automation and computer-integrated technologies, focused on current knowledge, skills and experience, within which further professional and scientific career is possible. **Keywords:** automation, computer-integrated technologies,	область	processes, productions, organizational structures), technical,

i -	fellowship programs.			
Further study	 2131.1 – Consultant-researcher (computational systems) 2131.2 – Research engineer in automation and computer systems; Continuing postdoctoral research or participating postdoctoral 			
	 2310.2 – University lecturer; 2131.1 – Researcher (computational systems); 			
	Professional qualification (according to the Professions Classifier DK 003:2010)			
	 activity Classifier DK 009:2010) 72.1. Investigation and development in fields on Natural and Technical sciences. 85.42. Higher education. 			
Suitability for employment	Types of economic activity (according to the Types of economic			
	4 – Graduates suitability for employment and further study			
	 training capable of organizing and conducting research, search for non-standard innovative solutions in automation and computer-integrated technologies. The program is based on the results of scientific schools to automate processes and technologies of various orientations, combined with the applied needs of enterprises in relevant industries. The program ensures the relevance of the content of the educational process and research to the current state of science in the field and the applied orientation through learning through research. Scientific and practical competencies of applicants are focused on solving new scientific and practical problems due to the industries integration at the fourth industrial revolution 			
•	 The program is focused on systematic comprehensive specialists 			

	5 – Teaching and assessment				
Teaching and	 lectures, practical and seminar classes, computer workshops, 				
learning	laboratory works, interactive workshops in classroom, distance,				
	mixed form;				
	 conducting classrooms with the professionals-practitioners 				
	involvement, including in the territories of partner companies;				
	 participation in scientific, scientific and technical international 				
	and interdisciplinary conferences, seminars, projects, trainings;				
	 independent work with the use of methodological and scientific 				
	information sources;				
	 participation in research project development groups; 				
	 consultations with scientific and scientific-pedagogical workers. 				
	Preparation for <i>teaching</i> involude semester pedagogical practice				
	under the guidance of highly qualified teachers (professors).				
	The implementation of the <i>scientific component</i> of the program is				
	carried out under the guidance of the supervisor. Specialized				
	laboratories available at the institution are used to conduct research.				
	Approbation of the results of the scientific component is carried out at				
	seminars and scientific conferences.				
Assessment	Current and semester control of the teaching component in the				
	laboratory reports, presentations, and essays form, written and oral				
	exams. Rating system.				
	The results of the <i>scientific component</i> are assessed according the				
	results of the annual reports, final results must be defended as the PhD				
	Thesis. 6 – Program competencies				
Total	Ability to solve complex problems in the automation and				
competence	computer-integrated technologies field, in research, study and				
	profession activity which involves deep rethinking of the existing and				
	developing new complete knowledges as well as professional practice.				
General	GC01. Ability to abstract thinking, analysis and synthesis				
competencies	GC02. Ability to generate new ideas (creativity).				
(GC)	GC03. Knowing and deep understanding of the subject area,				
	understanding of the professional and research activity.				
	GC04. Ability to work in an international context.				
Special	SC01. Ability to perform original research, achieve scientific results				
competencies	that create new knowledge in the field of automation and computer-				
(SC)	integrated technologies and related interdisciplinary areas and can be				
	published in top-ranking scientific journals in automation, computer				
	technology, instrumentation and related fields.				
	SC02. Ability to orally and in writing present and discuss the results				
	of research and / or innovative developments in Ukrainian and English,				
	a deep understanding of English scientific texts in the field of research.				
	SC03. Ability to apply state of the art methods of research, synthesis,				
	design of automation systems, computer-integrated technologies, their				

software and hardware components, specialized software in scientific and educational activities.

SC04. Ability to carry out scientific and pedagogical activities in higher education, to adhere to research ethics, as well as the rules of academic integrity in scientific research and scientific and pedagogical activities.

SC05. Ability to initiate, develop and implement comprehensive innovative projects in the field of automation and computer-integrated technologies and related interdisciplinary projects, leadership in their implementation.

SC06. Systematic scientific worldview and general cultural outlook.

7 – Program learning results (PR)

PR01. Have advanced conceptual and methodological knowledge of automation and computer-integrated technologies at the cross-border areas, as well as research skills sufficient for scientific and applied research at the level of modern world achievements in automation and computer-integrated technologies, obtaining new knowledge and / or innovation.

PR02. Freely present and discuss with specialists and non-specialists the results of research, scientific and applied problems of automation and computer-integrated technologies in state and foreign languages, qualified to reflect the results of research in scientific publications in leading international scientific journals.

PR03. Develop and research conceptual, mathematical and computer models of processes and systems, effectively use them to gain new knowledge and / or create innovative developments in the field of automation and computer-integrated technologies and related interdisciplinary areas.

PR04. Plan and perform experimental and / or theoretical studies of automation systems, computer-integrated systems and their components using modern research methods, hardware and software, critically analyze the results of their own research and the results of other researchers in the context of the whole complex of modern knowledge.

PR05. Develop and implement scientific and / or innovative engineering projects that provide an opportunity to rethink existing and create new holistic knowledge and / or professional practice and solve significant scientific and technological problems of automation and computer-integrated technologies in compliance with academic ethics and taking into account social, economic, environmental and legal aspects.

PR06. Be able to apply modern methods of analysis, synthesis, design in the study of automation systems, computer-integrated technologies, their software and hardware components.

PR07. Possess modern methods of pedagogical activity in higher education; be able to teach professionally-oriented disciplines of the specialty on the basis of systemic, methodological knowledge of automation and computer-integrated technologies and research results.

8 – Resource support for program implementation					
Staffing	According to the personnel requirements for staffing the				
	implementation of educational activities for the relevant level of higher				
	education, approved by the Resolution of the Cabinet of Ministers of				
	Ukraine dated 30.12.2015 № 1187 (effective) as amended on				
	23.05.2018 № 347.				
Logistics	According to the personnel requirements for logistics the				
	implementation of educational activities for the relevant level of higher				
	education, approved by the Resolution of the Cabinet of Ministers of				
	Ukraine dated 30.12.2015 №1187 (effective) as amended on				
	23.05.2018 № 347.				
Інформаційне та	According to the personnel requirements for information and				
навчально-	methodical support the implementation of educational activities for the				
методичне	relevant level of higher education, approved by the Resolution of the				
забезпечення Cabinet of Ministers of Ukraine dated 30.12.2015 № 1187 (eff					
	as amended on 23.05.2018 №347.				
	Using the library funds, electronic repository, and university				
	distancelearning platform.				
	9 – Academic mobility				
National mobility	Possibility of concluding agreements on academic mobility				
according to the current higher education legislation of Ukr					
International mob	ility Academic mobility program Erasmus +, opportunity to				
	participate in of the university's academic mobility programs on				
a competitive basis.					
Foreign applicants	Studying is providing in English and Ukrainian languages.				
education	Ukrainian is studied as a foreign language.				

2. EDUCATIONAL COMPONENT OF THE PROGRAM

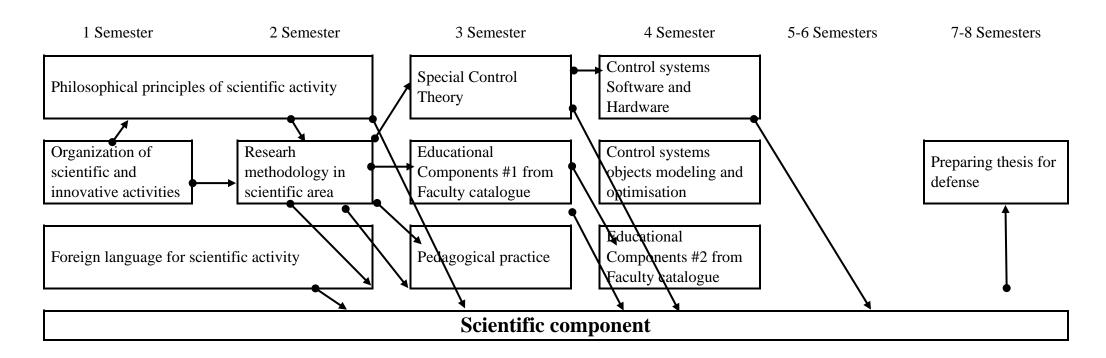

Code	Educational Components (academic disciplines, course projects (works), practices, qualification work)	Number of credits	Distribution
1	2	3	4
	Compulsory educational components		
	General courses for acquiring general scientific (philosoph	ical) compete	ncies
H 1	Philosophical principles of scientific activity	6	exam
	Courses for acquiring language competenc	ies	
H 2	Foreign language for scientific activity	6	exam
	Courses for obtaining deep knowledge of the sp	ecialty	
H 3	Research methodology in scientific field	4	final tests
H 4	Special Control Theory	4	exam
H 5	Control systems Software and Hardware	4	exam
H 6	Control systems objects modeling and optimization	4	exam
Courses for obtaining universal researcher competencies			
H 7	Organization of scientific and innovative activities	4	final tests
H 8	Pedagogical practice	4	final tests
Optional educational components			
B 1	Educational Components #1 from Faculty catalogue	6	final tests

1 2		3	4
B 2	Educational Components #2 from Faculty catalogue	6	final tests
The total volume of the compulsory educational components:		36	
The total volume of the optional educational components:			12
THE TOTAL VOLUME OF THE EDUCATIONAL PROGRAM			48

3. SCIENTIFIC COMPONENT OF THE PROGRAM

Year of training	Content of the PhD student's research activity	Distribution
1	2	3
1 year	Choice and substantiation of the topic of own scientific research, determination of the content, terms of performance and volume of scientific works; selection and substantiation of the methodology of conducting own research, review and analysis of existing views and approaches that have developed in modern science in the chosen field. Preparation and publication of at least 1 article (usually a review) in scientific professional publications (domestic or foreign) on the research topic; participation in scientific and practical conferences (seminars) with the publication of abstracts.	Approval of the PhD student's individual plan by the academic council of the institute / faculty, reporting on the progress of the individual PhD student's plan twice a year
2 year	Conducting own research under the guidance of the supervisor, which involves solving research problems through the use of a set of theoretical and empirical methods. Preparation and publication of at least 1 article in scientific professional publications (domestic or foreign) on the research topic; participation in scientific and practical conferences (seminars) with the publication of abstracts.	Reporting about the progress of the individual PhD student's plan twice a year
3 year	Analysis and generalization of the obtained results of own scientific research; substantiation of scientific novelty of the obtained results, their theoretical and / or practical significance. Preparation and publication of at least 1 article in scientific professional publications on the research topic; participation in scientific and practical conferences (seminars) with the publication of abstracts.	Reporting about the progress of the individual PhD student's plan twice a year
4 year	Registration of scientific achievements of the post-graduate student in the form of the dissertation, summing up concerning completeness of coverage of results of the dissertation in scientific articles according to the current requirements. Implementation of the obtained results and receipt of supporting documents. Submission of documents for preliminary examination of the dissertation. Preparation of a scientific report for final certification (defense of the dissertation).	Reporting about the progress of the individual PhD student's plan twice a year. Providing a summary on the scientific novelty, theoretical and practical significance of the research results

4. EDUCATIONAL PROGRAM STRUCTURE AND LOGICAL SCHEME

5. FORM OF GRADUATES ASSESSMENT

Graduation certification of the postgraduate students in the educational program of the specialty *151 Automation and computer-integrated technologies* is carried out in form of thesis public defense and ends with the issuance of a standard document on awarding him the Philosophy Doctor degree with qualification: Philosophy Doctor in Automation and Computer integrated technologies.

PhD thesis is an independent detailed research that offers a solution to a complex problem in the field of automation and computer-integrated technologies or on its border with other specialties, which involves a deep rethinking of existing and creating new holistic knowledge and / or professional practices.

The thesis should not contain academic plagiarism, falsification, fabrication. The thesis and its abstract should be posted on the higher education institution (scientific institution) website. The thesis must also meet other requirements established by law.

6. CONFORMING MATRIX BETWEEN THE PROGRAM COMPETENCIES AND THE EDUCATIONAL PROGRAM COMPONENTS

	H 1	H 2	Н3	H 4	Н 5	Н 6	Н7	Н8	Scientific component
GC01	+		+						
GC02	+		+						+
GC03			+	+	+	+	+		+
GC04		+					+		
SC01			+						+
SC02		+					+		
SC03				+	+	+			+
SC04								+	
SC05				+	+	+			+
SC06	+						+		+

7. CONFORMING MATRIX BETWEEN THE PROGRAM LEARNING RESULTS AND THE EDUCATIONAL PROGRAM COMPONENTS

	H 1	H 2	Н3	H 4	Н 5	Н 6	Н7	Н8	Scientific component
PR01			+	+	+	+			+
PR02	+	+					+		+
PR03			+			+			+
PR04				+	+				+
PR05			+				+		+
PR06				+	+				+
PR07								+
